What is the difference between Spandex and Lycra®?

Answered by
*To answer the question we contacted DuPont.
.

Thank you for your inquiry. This note is to verify that LYCRA® elastane fiber manufactured by DuPont does not contain any natural latex or rubber. However, you should be aware that a garment which contains LYCRA® elastane fiber may also contain natural rubber or latex. The garment manufacturer is only required to list the fiber components which exceed a certain percent. For example, it would be possible for a swimsuit label to say 90% nylon and 10% LYCRA®, yet have a small amount of natural latex around the legs.

The only way for a consumer to be certain that a garment does not contain any natural rubber is to look for a label on the garment which certifies the article as being ?latex free? or to contact the manufacturer for that information. Unfortunately we do not have a listing of companies that produce latex free apparel.

LYCRA® is DuPont?s brand of elastane, or spandex. The word ?spandex? is used only in the United States while ?elastane? is recognized worldwide, so we tend to use the more widely known term.

I hope this information is helpful. Please contact us again if you need further assistance and visit our website **http://www.lycra.com** [1] for more information about our products.
